

THE PRODUCTION SUBSTRATE FOR AI-BUILT SAAS

Hatchik

The production substrate your AI coder builds on — *no platform, no lock-in, no demos.*

Farhan Irshad

Founder · Operating entity: Omani-registered company

May 2026 · hatchik.com

AI builds the prototype. Then they hit a wall.

Non-technical founders are using AI coding tools to ship working prototypes. Then they get stuck on the infrastructure step — auth, payments, mailboxes, mobile, a real database — and the project quietly dies between “looks working” and “a real business.”

PERSONAL TRAINER

Meal-prep app for PT clients

WHERE THEY PLATEAU

Prototype generates meal plans. Cannot bill clients, cannot send weekly emails, cannot ship a mobile build.

CONSULTANT

Interactive framework demo

WHERE THEY PLATEAU

Slick interaction. No login, no usage limits, no way to charge enterprise prospects the £5K it's worth.

DESIGNER

The tool they always wanted

WHERE THEY PLATEAU

Lovely UI. No real database, no auth, no signed mobile build to show on a phone in a room.

Every persona above ships a working-looking thing. None of them ship a business.

We give the AI tool a real SaaS to build on.

Customer signs up. In ~60 seconds they have a sandbox at `<slug>.hatchik.com` with auth, Postgres, payments, mail, mobile and a GitHub repo all wired. Their AI tool reads the `AI_CONTEXT.md` handoff file, knows the layout, pushes changes into the repo. We redeploy in ~30 seconds.

Customer goes from “looks working” to “real product” without learning infrastructure.

This isn't 3-year SaaS. It's a 12-18 month hype-cycle sprint

C U R S O R

1M+

paid users in ~24 months

≈40–50%/month compounding through the hype peak.

L O V A B L E . D E V

\$5M+

MRR in ~12 months

≈50K paying users from a standing start.

B O L T . N E W

1M

users in <12 months

Peak weeks hit 4–5 figure signups per day.

THIS WINDOW IS NOW · THE INFRASTRUCTURE LAYER IS UNOWNED

AI coding tools are doing hyper-growth right now — not gradually, not eventually. Someone is going to own the production substrate every Cursor, Lovable and Bolt user graduates to. Founders who waited on Cursor's 2023 curve are not catching it in 2026.

Sources: Cursor public statements 2024–2025; Lovable.dev / Anton Osika public posts mid-2025; Bolt.new / StackBlitz public claims 2024.

Four steps. Real product live in a single sitting.

01

Wizard at /start

60 seconds

A terminal window with a dark background and three colored window control buttons (red, yellow, green) at the top left. The terminal displays the following text:

```
product:  PrepSheet – meals for
          PT clients

email:    alex@prep-pt.uk

plan:    Sandbox (free, 30-
          day idle)
```

At the bottom, there is a blue button with the text "Start building →".

02

Sandbox live

auto-provisioned

A terminal window with a dark background and three colored window control buttons (red, yellow, green) at the top left. The terminal displays the following text:

```
https://prepsheet.hatchik.com

PrepSheet

Meals for PT clients

9 containers up. Auth, Postgres,
Storage, Realtime, Stripe stub,
Resend, Caddy + wildcard TLS.
```

03

AI reads handoff

AI_CONTEXT.md

A terminal window with a dark background and three colored window control buttons (red, yellow, green) at the top left. The terminal displays the following text:

```
$  claude code

   reading AI_CONTEXT.md...

>  edit apps/web/src/product/

>  git push
```

04

Push to deploy

~30 seconds

A terminal window with a dark background and three colored window control buttons (red, yellow, green) at the top left. The terminal displays the following text:

```
webhook  received  sha=a12c4e1

docker   compose up -d  rebuilt 2/9

status   deployed_at: 2026-05-
          13T10:14:02Z

deployed
```

Twelve production pieces. Day one. No DIY.

Auth

Supabase, magic-link + JWT

Postgres

Supabase, RLS-scoped

Storage

Supabase Storage

Realtime

Postgres CDC channels

Stripe checkout

Test + live keys

Paddle MoR

Global tax handled

Resend mail

Transactional + DKIM

Mailboxes

Infomaniak, Launch tier

Capacitor

iOS IPA + Android APK

GitHub repo

Per-tenant, private

Push-to-deploy

Webhook + AI deploy token

Status page

status.hatchik.com

Every tile is shipping today. Cross-referenced against FIRST_CUSTOMER_RUNBOOK.md.

TAM, SAM, SOM — sized from public AI-coder tool numbers.

TAM — total addressable

~310K users globally · **£56M/yr today**

AI-coder ICP, blended £180 ARPU. 2027 projection: £200M+/yr.

SAM — serviceable

~190K users · **£34M/yr → £120M/yr by 2027**

English-first, Paddle-eligible geo, <200ms latency from Hetzner NBG1.

SOM — 12-18 month sprint

Sprint base	~5K paying	by month 12
Sprint upside	~15K paying	by month 18

Note: SOM at acquisition is a different number than SOM at steady-state — see slide 15 landing zones.

Hatchik vs the AI-app-builder pack.

	Hatchik	Bolt	Lovable	Replit Agent	Bubble	ShipFast
Your existing AI tool works	✓	~	—	~	—	✓

✓ full ~ partial — not supported

Three things no competitor combines.

WEDGE 01

01

Your AI tool, not ours.

Every other AI builder ships its own chat. We plug into the one your customer already trusts — Claude Code, Cursor, Windsurf, Copilot. Zero context switching, zero retraining.

WEDGE 02

02

Your code, your repo, your VPS.

Every tenant gets a private GitHub repo on day one. Want to leave? You already own everything. Exit cost is zero — which is exactly why our customers stay.

WEDGE 03

03

Pre-wired production stack.

Auth, Postgres, payments, mail, mobile, MoR billing — all wired and live on day one. It's a working SaaS the moment they sign up, not a sandbox to graduate from.

Three tiers. Paddle as merchant of record. Repriced for the hype window

FREE · EVALUATION

Sandbox

£0*30-day idle auto-archive*

- Sandbox at <slug>.hatchik.com
- Shared host (Hetzner CAX21)
- GitHub repo + AI handoff
- Capped: one active per email

PRODUCTION · SOLO

Launch

£89*setup, then £14/mo**Dedicated VPS + domain + mailboxes*

- Own VPS in customer region
- Five mailboxes (Infomaniak)
- BYO or registered domain
- Push-to-deploy + mobile builds

PRODUCTION · SCALE

Growth

£39*per month**Healthier monthly margin*

- Larger VPS class
- Priority redeploy queue
- Cohort analytics access
- Founder support window

REPRICED · UP FROM £9 / £24

Original pricing was founder-empathy underpricing. Repriced to capture value in the hype window. Cursor Pro \$25/mo and Lovable \$25-100/mo precedents support the band. Bump lifts ongoing margin: Launch ~£0.50/mo → ~£4.40/mo; Growth ~£15.50/mo → ~£28.50/mo. Paddle handles MoR.

Sprint cadence. 3× heavier in months 2-6.

MONTHS 0 - 2 · BETA + LAUNCH

Founder-led, 100 friendly users

Polished sandbox, pricing tested on first 50 paying. Tight feedback loop. No marketing spend yet.

MONTHS 2 - 4 · HYPE INJECTION

Product Hunt + Show HN + 5× YouTube

All four channels lit at once. Theo, Fireship-adjacents, indie-hacker channels. Target 5K signups, 250-500 paying.

MONTHS 4 - 6 · COMPOUND

Reddit + X build-in-public + newsletters

r/ClaudeAI, r/cursor value content. Weekly MRR posts on X. First partnership signal. Target 15K signups, 1.5-2K paying.

MONTHS 6 - 15 · DECISION + CAPITALISE

Raise, exit, or stay lean

Month 6-9: pre-seed conversation, acquirer signalling, or run lean. Month 9-15: paid acquisition engine if numbers support it.

The four channels stay. The intensity is 3× heavier in months 2-6 than a steady-state launch. The window doesn't reopen.

Validate by signup #100. Decide raise-or-exit by month 6.

- VALIDATE BY SIGNUP #100 · DECIDE BY MONTH 6
- 01 **Sandbox → Launch conversion**
Assumed 5% · industry 3-10%
 - 02 **Launch monthly churn**
Assumed ~3%/mo · signal in 60-90 days
 - 03 **Time to Launch → Growth**
Assumed 6 months in sprint mode

Blended LTV (repriced)	CAC ceiling (3:1)	Cohort dashboard
£520	£175	Live

MRR month 0-18. Two sprint scenarios.

Sprint base

M18 MRR
~£135K

Organic + creator sponsorships. Hits £40-80K MRR by month 9, plateaus ~£100-150K by month 18.

Sprint upside

M18 MRR
~£380K

Full sprint executes. Hits £200-400K MRR by month 18. Capitalise window opens at month 9-12.

Trajectories anchored on Cursor / Lovable / Bolt growth curves at comparable product maturity. Pricing assumes Launch £14/mo, Growth £39/mo.

Repriced unit economics × sprint MRR.

PER - CUSTOMER MARGIN · BEFORE → AFTER REPRICE		
	Before (£9 / £24)	After (£14 / £39)
Launch ongoing/mo	~£0.50	~£4.40
Launch ongoing/yr	~£6	~£53
Growth ongoing/yr	~£186	~£353

WHAT THIS MEANS AT MONTH 18

Sprint base · ~£135K MRR · ~£1.6M ARR

Real business at solo-founder scale. Profitable from ~month 6.

Sprint upside · ~£380K MRR · ~£4.5M ARR

Acquirable or fundable. The capitalise window from slide 15.

HONEST FRAMING

Sprint base = real business. Sprint upside = acquirable or fundable.

Repricing lifts Launch margin ~9× and roughly doubles Growth margin per customer. Year-1 OPEX target ~£90K (marketing £35K · modest hires £25K · legal/accounting £10K · sandbox overruns £8K · contingency £8K · tools £3K · support £1K) — no founder draw included; EBITDA figures are pre-comp. Sprint base clears £300K+ EBITDA at month 12 with ~5,000 paying. Sprint upside produces the metric profile that triggers pre-seed-into-seed or strategic-acquisition conversations.

Where this lands at month 12-18.

Acquisition framing is a credible upside scenario with category precedents (Vercel > Nuxt Labs / Splitbee; GitHub > Copilot-adjacent acquisitions). Not a guarantee, not a forecast.

Not a pitch deck for a slide. A pitch deck for a working product

- ✓ End-to-end automated Sandbox provisioning (~60s)
- ✓ Magic-link + verification-code Hatchik account
- ✓ Self-serve sandbox deletion + admin lifecycle (30-day archive)
- ✓ Per-tenant private GitHub repo + push-to-deploy webhook
- ✓ AI deploy token — Claude / Cursor / Windsurf can ship directly
- ✓ Mobile build pipeline (GitHub Actions, unsigned IPA + APK)
- ✓ Status page (status.hatchik.com)
- ✓ Docs site (docs.hatchik.com)
- ✓ Cohort analytics dashboard (admin)
- ✓ Abuse protection (Turnstile, geo-IP, disposable-email block, throttle)
- ✓ Stripe customer-portal endpoint (test/live mode aware)
- ✓ Idle-archive + restore lifecycle (snapshot + 7-day grace)

Built solo + AI-augmented in ~3 weeks. Every item above is in production today. Cross-referenced against the agent commit log.

We are not pretending these don't exist

0 1

Hype window closes

If Anthropic / Cursor / Windsurf release their own deployment layer in the next 6 months, our wedge tightens dramatically. The category goes from open to claimed.

MITIGATION

Aggressive partnership outreach in months 0-4. Position as their deployment surface, not their competitor.

0 2

Single-VPS infrastructure

Sandbox tier runs on one Hetzner CAX21. Capacity caps at 4–5 concurrent active tenants before swap pressure.

MITIGATION

DR plan written but unautomated. Second-region rollout (India/SEA latency) on month-6 roadmap.

0 3

Mobile signing out-of-band

Customer must bring their own Apple Developer + Android keystore credentials to ship signed binaries.

MITIGATION

Documented inline in tenant repo with cert-generation walkthroughs. Hatchik never touches signing keys.

12-month sprint capital. Decide raise-or-exit at month 6.

RAISING

£[500K - 1M]

HORIZON

12 months to decision point

Pre-seed · SAFE or convertible · founder fills final number

USE OF FUNDS · SPRINT ALLOCATION

60%

Paid acquisition

Creator sponsorships + retargeted paid in months 2-9. At repriced LTV £520, CAC ceiling £175 — paid becomes viable.

25%

First hires

One engineer (substrate hardening, second region, signed mobile pipeline). One marketer (content engine).

15%

Infrastructure

Multi-region rollout, abuse/scaling headroom, partnership-integration build for Anthropic / Cursor / Windsurf.

TARGET AT MONTH 12 · DECISION POINT

[fill] paying customers · £[fill]K MRR · validated funnel · acquirer + raise conversations live

The production substrate *your AI coder builds on.*

No platform. No lock-in. No demos.
