

THE PRODUCTION SUBSTRATE FOR AI-BUILT SAAS

Got an idea?

We'll get it

launched.

Your domain · your data · no platform · no lock-in. Owning the seam between AI builders and infrastructure — £20–100M strategic-exit window in 12–18 months.

YOUR AI · CHAT · · ·

you > build me a meal prep app called PrepSheet

claude > I'll set up a free Sandbox so we can
start building straight away. OK?

you > yes please

claude >

✓ live at prepsheet.hatchik.com

✓ repo cloned

✓ 23 starter tasks ready

what shall we build first?

AI builds the prototype. Then they hit a wall.

Non-technical founders ship working-looking prototypes with AI tools. They get stuck on the infrastructure step — auth, payments, mailboxes, mobile, a real database — and the project quietly dies between "looks working" and "real business".

Cursor / Lovable / Bolt filings

PERSONAL TRAINER

A meal-prep app for clients.

△ stripe · no API key configured

Where they plateau: generates meal plans.
Cannot bill, cannot send weekly emails, no mobile build.

CONSULTANT

An interactive framework demo.

△ no auth · no billing

Where they plateau: slick interaction. No login,
no usage limits, no way to charge the £5K it's worth.

DESIGNER

The tool they always wanted.

△ no signed iOS build

Where they plateau: lovely UI. No real database,
no auth, no signed mobile build to demo on a phone.

Every persona above ships a working-looking thing. **None of them ships a business. ~310K of them, £56M+ TAM today.**

We give the AI tool a real SaaS to build on.

Customer signs up. In ~60 seconds they have a sandbox at slug.hatchik.com with auth, Postgres, payments, mail, mobile and a private GitHub repo all wired. Their AI tool reads the handoff file, pushes to the repo, we redeploy in ~30 seconds.

Customer goes from "looks working" to "real product" **without learning infrastructure.**

Available today. The gap. Tomorrow's opportunity.

Three points on the founder's value chain. Hatchik owns the middle today, and earns the right to compound into the third.

AVAILABLE TODAY
NOT US

Idea → Prototype.

Cursor · Lovable · Bolt · Claude Code

Non-technical founder uses AI to ship a working-looking prototype. Hot category, not where we play.

We meet you AFTER this step.

(LIVE)

Prototype → Sellable product

Hatchik substrate

Auth, Postgres, payments, mail, mobile, MoR billing, GitHub repo. Day-one SaaS. Sign up, pay, get receipts, ship mobile.

LAUNCH £14/MO · GROWTH
£39/MO

HATCHIK'S
OPPORTUNITY TOMORROW
· Y2 WATCHLIST

Product → Real business.

Hatchik+ end-user services

White-labeled AI agents the customer offers to THEIR end users — built on the substrate already running.

Per-service or % of revenue.

Not a 3-year SaaS. A 12–18 month sprint

AI coding tools are hyper-growing right now — not gradually, not eventually. Someone is going to own the production substrate every Cursor, Lovable and Bolt user graduates to. Founders who waited on Cursor's 2023 curve are not catching it in 2026.

cursor

Cursor + Claude Code · GitHub

IDEA

Booking SaaS for SE-Asian wedding
& event vendors

PAIN

Comfortable in the stack — burned
out by glue work he could automate.

*"I want Paddle MoR + a real GitHub repo from day one
— not a walled garden."*

Two layers exist Nobody owns the seam.

AI builders own chat → prototype. Infra players own code → runtime. The substrate-with-business-plumbing layer the AI-coder customer actually needs is unowned.

AI BUILDERS · CHAT →
PROTOTYPE

Lovable

Bolt.new

v0 (Vercel)

Replit Agent

Pi App Studio

Bubble

- Their AI, their chat, their runtime. No BYO.
- Code in their walled garden. Export friction.
- No auth · payments · mail. "Deploy" = preview.

Where Hatchik wins: substrate pre-wired · day-one SaaS.

hatchik

**Hatchik sits where
both groups stop.**

INFRA · DEPLOY · CODE →
RUNTIME

Vercel

Render

Railway

Fly.io

Heroku

DO App Platform

- Deploys code. Auth · mail · payments are yours.
- Built for engineers. Non-tech founder can't stitch.
- Usage-based pricing hard for a learner to predict.

Where Hatchik wins: BYO AI tool · real GitHub · real stack.

Six things **no competitor combines.**

Each wedge solves a real founder cost — knowledge, time, money, or trust. Together: a path from idea to revenue without an engineering hire.

0 1

ZERO STITCHING

One-click convenience.

Wizard → live SaaS in ~60 seconds. No infra learning curve. No yak-shaving.

0 2

12 PIECES WIRED

Full suite to monetise.

Payments, MoR, email, mobile shells, status — every piece a real product needs, day one.

0 3

EXPERT - OPTIONAL

Abstraction over complexity.

Customer doesn't see Caddy, Docker, RLS, DKIM. They see a working product they can charge for.

0 4

BYO AI

Your AI tool, not ours.

Cursor, Claude Code, Windsurf, Copilot — plug into the one your customer already trusts.

0 5

ZERO LOCK-IN

Your code, your repo, your VPS.

Per-tenant private GitHub repo on day one. Want to leave? You already own everything.

0 6

FIXED +
KNOWABLE

Predictable cost, no surprise bills.

Pass-through overage × 1.60. PAYG top-ups. AI credit included. No surprise £400 month.

Three tiers. Paddle as MoR.

Sandbox is the frictionless entry — designed to convert. Launch is the working SaaS. Growth auto-promotes when traction earns it.

RECOMMENDED

STAGE 0 · EVALUATION

Sandbox

£0

Free forever while active · 30-day idle auto-archive

FRictionLESS · 1-2 DAYS AFTER AWARENESS

100% TOP-OF-FUNNEL

- Sandbox at slug.hatchik.com
- Shared host (Hetzner CAX31)
- Private GitHub repo + AI handoff
- Capped one active per email
- £0.50 one-off AI credit

STAGE 1 · PRODUCTION · SOLO

Launch

£89 +£14/mo

Setup, then £14/mo annual or £17/mo monthly

WITHIN 30 DAYS OF SIGN-UP

5% OF SANDBOXES

- Production hosting + domain + mailboxes
- Shared host in customer region
- 3 mailboxes (Infomaniak)
- BYO or registered domain
- Push-to-deploy + mobile builds
- £3/month AI credit included

STAGE 2 · PRODUCTION · SCALE

Growth

£39 /mo

Auto-graduates at customer's 15th end-user signup

WITHIN 6 MONTHS OF LAUNCH

1% OF SANDBOXES

- Dedicated VPS in your region
- Priority redeploy queue
- 10 mailboxes + Supabase Studio
- Cohort analytics access
- Founder support window
- £10/month AI credit included

Pass-through overage at cost × 1.60 (40% net + Paddle fee). Mid-range Launch £11.55/mo · Growth £31.74/mo · Sandbox cost £0.30/mo.

Where they live. How we reach them.

Four addressable audiences. Each with channel, visual, and per-channel CAC. Combined ceiling sits well below blended LTV.

BLENDED LTV **£520** · CAC CEILING (3:1) **£175** · ALL BELOW-CEILING ACROSS CHANNELS

AUDIENCE 01 ·
REDDIT + X

r/cursor ·
 r/ClaudeAI ·
 X / hn

AI-tool power users.

Build-in-public threads. Weekly MRR posts. AI_CONTEXT.md handoff demos. Organic-led.

CAC £0-40

AUDIENCE 02 ·

Theo ·
 Fireship-adj ·
 vibe coders

Creator-adjacent founders.

60-second sandbox demos sponsored. Promo codes → 90-day Launch credit.

CAC £80-140

AUDIENCE 03 ·
PH / TLDR / HN

Product Hunt ·
 TLDR · Hacker
 NL

Indie SaaS launchers.

Coordinated PH launch + newsletter sponsorships at peak hype. UTM attribution direct to signup.

CAC £40-120

AUDIENCE 04 ·
PARTNERS

Anthropic ·
 Cursor ·
 Lovable / Bolt

AI-tool partners.

Co-marketing on integration listings. Doubles as acquirer signaling for the M12-18 exit window.

CAC £0 (rev-share)

Month-by-month. Spend tagged to phase.

Four phases, mirroring the four audiences on the prior slide. Spend rises only after the funnel signals validation by signup #100.

Total Y1 paid spend ≈ £420K (60% of raise). All channels below CAC ceiling at 3:1.

Validate by signup #100. Decide by month 6.

Two checkpoints, hard rules. First — does the funnel work. Second — what kind of company is this becoming.

CHECK 01 · VALIDATE BY SIGNUP #100

Does the funnel work at all?

The first 100 sandbox signups tell us whether the product converts, retains, and is priced near right. If two of three miss, paid spend pauses.

Sandbox → Launch conversion $\geq 4\%$
Industry band 3–10%. Below 3% = reprice.

Launch monthly churn $\leq 4\%$
Below 4% holds LTV. Above 6% = product gap.

Time to AI handoff demo $< 7d$
AI tool used on the sandbox within the first week.

CHECK 02 · MONTH 6 DECISION

What is this becoming?

At M6 the picture is clear enough to commit. We choose between three paths — and the next 6 months execute that choice.

RAISE **Pre-seed → seed.**
If MRR + growth-rate signal hypergrowth.

ACQUIRE **Strategic conversations.**
If a partner / AI lab signals strong interest.

RUN LEAN **Founder-led, no team.**
If economics work but growth is steady, not vertical.

GATE · If check 01 misses, paid spend pauses. The M6 decision is a fork, not a default.

MRR + EBITDA. Two sprint scenarios.

Identical axes. Revenue and EBITDA on each. The base case is profitable from ~M6; the upside case has the same shape, taller.

M6 · DECIDE · THREE EXIT OPTIONS FOR THE DAY-ONE INVESTOR

At month 6. Three exit options.

Each is a real path. Investors see acquisition, further-funding growth, or a profitable lean business returning healthy ROI — all underwritten by the same first cohort.

ACQUISITION · M12–18

Strategic acquisition.

\$**20–100**_M

VALUATION BAND

5–15K active users, clean positioning, alignment with a major AI tool vendor at M12–18.

ANTHROPIC

VERCEL

GROWTH · HYPERGROWTH
RAISE

Pre-seed → seed raise.

£**20–50**_M

VALUATION (PROJECTED)

£100–300K MRR with 30%+ MoM growth at M12–15. Raise funds 5–8 hires, full paid engine, product expansion. Y2 ARR target £8–15M.

EARLYBIRD AI

SEEDCAMP

LEAN · PROFITABLE
BUSINESS

Healthy ROI · no raise.

£**25–65**_{K/mo}

FOUNDER DRAW + ROI

Sprint base outcome. Profitable from ~M6. Investor returns capital via founder share-buyback / dividend on a ~24–36 month horizon.

CONVERTKIT-STYLE

INDIE SAAS

Top 3 risks. Stated honestly. Mitigations ready.

We're not pretending these don't exist. Full risks register in appendix.

HIGH · 01

Big AI lab ships its own deployment layer.

Anthropic / Cursor / OpenAI shipping a "Claude Code Cloud" or similar in the next 6–12 months closes the wedge.

MITIGATION

Aggressive partnership outreach M0–4. Position as their deployment surface, not a competitor. Make Hatchik acquirable, not buildable.

MED · 02

Peak coincidence on shared sandbox host.

If >30% of sandboxes go warm simultaneously, CAX31 RAM/CPU contention bites users.

MITIGATION

Watermark alert at 35-warm-concurrent → auto-provision second CAX31. Cost-per-sandbox stays in band (+£11.30/mo).

LOW · 03

Wake latency on idle-suspended sandboxes.

10–15s cold start after 2h+ idle could feel broken to first-time users.

MITIGATION

"Your sandbox is warming up..." splash in the AI tool's deploy-status callback. Acceptable for dev-env framing.

Sprint capital. Decide at month 6.

RAISING

£500K – £1M

Horizon: 12 months to decision point. Pre-seed · SAFE or convertible · founder fills final number.

ALLOCATION

USE OF FUNDS

Paid acquisition

60% · ~£420K

Creator sponsorships + retargeting M2–9. At LTV £520, CAC ceiling £175 — paid becomes viable.

First hires (12-mo burn)

25% · ~£175K

One engineer (substrate hardening, second region, signed mobile pipeline) + one marketer (content engine).

Infrastructure + partnerships

15% · ~£105K

Multi-region rollout, abuse/scaling headroom, partnership-integration build for Anthropic / Cursor / Windsurf.

TARGET

M12 · ~750 paying · ~£55K MRR · validated funnel · acquirer + raise conversations live.

Customer trust as moat. Predictable as armour.

Each moat is something the customer feels, not just a balance-sheet line. Hard to copy because they compound through the customer's own time and trust.

01

Their product, their code.

Per-tenant GitHub repo, day one. Customer leaves with everything. Trust comes from never feeling locked in.

02

Predictable costs.

Pass-through × 1.60 + PAYG top-ups. No surprise £400 month. Founders can plan a year on a working hypothesis.

03

Founder doesn't need a CTO.

Hatchik abstracts the parts a non-technical founder can't hire for at this stage. They never have to learn DKIM.

04

BYO-AI is a community lexicon.

"The production substrate for AI-built SaaS." Labs consider acquiring, not retraining every customer's mental model.

05

Wholesale relationships.

Anthropic, OpenAI, Hetzner, Infomaniak at enterprise rates by 5K customers. Margin uplift competitors can't see.

06

Founder-led for the first 500.

Customer knows the person who'll fix their bug. Can't be replicated by a corporate product team. Compounds reputation.

Thank you.

The production substrate your AI coder builds on.

No platform. No lock-in. No demos.

GENERAL

hello@hatchik.com

WEB

hatchik.com

FOUNDER

Farhan Irshad

LINKEDIN

linkedin.com/in/farhanirshad

Appendix. Detail, behind the headline.

23 Competitor deep-dive — AI builders vs infra players

24 AI-lab disruption risk + mitigation strategy

25 Full risks register

26 MRR build-up — cohort × ARPU × churn

27 Use of funds — detailed allocation

28 Sandbox + Launch capacity management

Two-layer landscape. Hatchik on the seam.

Coverage across BYO-AI, plumbing, owned code, exit cost, provisioning, mobile, MoR billing, and starting price.

AI BUILDERS

Lovable · Bolt · v0 · Replit Agent · Bubble

Own the chat-to-prototype loop. Their AI, their chat, their runtime. Code lives in their walled garden. Hatchik wins on BYO AI + real GitHub + real stack.

INFRA · DEPLOY

Vercel · Render · Railway · Fly · Heroku

Deploy your code — auth, mail, payments, mobile are yours. Built for engineers. Hatchik wins on substrate pre-wired + day-one SaaS.

PRICING ENTRY

Hatchik £14/mo vs \$20–\$39+

Lower entry plus included AI credit makes Hatchik below-friction for sandbox conversion. Substrate value at entry-tier pricing.

EXIT COST

£0 from Hatchik · medium-to-high from AI builders

Customer's repo lives on their GitHub from day one. Switching cost is zero, which is exactly why they stay.

What if the labs **ship their own?**

The single biggest risk. Mapped honestly: who could ship it, when, what we lose, how we defend.

ANTHROPIC · MED · 6-18 MO

Claude Code Cloud

Managed deployment for Claude Code projects. Already deploys via MCP; one container layer from owning the runtime.

OPENAI / CODEX · MED-LOW · 12-24 MO

Hosted runtime via ChatGPT Pro / Team

OpenAI's posture is model-API first. Less likely solo but plausible via partnership.

CURSOR / WINDSURF · HIGH · 6-12 MO

Cloud preview → full SaaS

Already lightweight cloud previews. Substrate-grade is the obvious next step.

DEFENCE

Sprint, acquirability, brand vocabulary, drop-in architecture

Capture first 5–15K customers before any lab ships. BYO-AI brand becomes acquisition target, not extinction.

Six risks. Stated honestly. Mitigations ready.

HIGH · 01 · AI-LAB DISRUPTION

Big-lab deployment in 6–18 mo

Mit: early share, brand vocabulary, acquirable architecture. Outreach M0–4.

MED · 02 · PEAK COINCIDENCE

>30% sandboxes warm

Mit: 35-warm watermark → auto-provision second CAX31 (+£11.30/mo).

LOW · 03 · COLD-START LATENCY

10–15s wake from idle

Mit: "sandbox warming up..." splash in deploy-status callback.

LOW · 04 · STUDIO COPY DRIFT

Studio rails removed

Mit: copy actioned across index, docs, install, account.

LOW · 05 · LEGACY SANDBOXES

~13 on CAX21 with Studio

Mit: don't migrate. Density gains apply to new provisions only.

LOW · 06 · SNAPSHOT REGRESSION

No click-to-snapshot in Studio

Mit: AI tool triggers pg_dump via /api/tenants/<slug>/snapshot.

Base £135K · upside £380K. How we get there at M18.

Cohort × paid-conversion × ARPU × retention. Pessimistic / mid / sprint anchored on AI_COGS_SENSITIVITY.xlsx.

SANDBOX SIGNUPS

~30K base · ~80K upside

Cumulative sandbox signups by M18. Sprint upside adds paid-acquisition lift on top of organic.

LAUNCH → GROWTH (12%)

~180 base · ~600 upside

Growth conversion lifts to 15% in upside on stronger product surface area.

SUB MRR

£14.9K base · £43.8K upside

Launch (£15.80) + Growth (£39) blended. Setup amortised + token overage + affiliate stack on top.

SANDBOX → LAUNCH (5%)

~1,500 base · ~4,000 upside

Conversion holds 5%. Below 3% triggers reprice. Above 7% accelerates Growth funnel.

ACTIVE AFTER ~3% / MO CHURN

~620L · ~130G base · ~1,700L · ~430G upside

Active subs after monthly churn. Drives MRR build-up.

M18 LANDING

£135K base · £380K upside MRR

Pessimistic case (3% conv., 5% churn) lands ~£60K M18. Sprint base = 5% / 3%. Upside adds paid lift.

How the raise is spent **By line item.**

Modelled at the £700K midpoint of the £500K–£1M range. Scales linearly above and below.

PAID ACQUISITION · 60% · £420K

Creator + retargeting + newsletters + events

Creator £180K · Retargeting £140K · Newsletters £50K · Events £30K · Affiliate £20K.

FIRST HIRES · 25% · £175K

Engineer + Marketer + Contractor

Engineer #1 £95K (substrate, regions, mobile) · Marketer #1 £65K · Contractor £15K (design, devops, legal).

INFRA + PARTNERSHIPS · 15% · £105K

Second region + abuse + partner integration + compliance

Second region £25K · Abuse + scaling £20K · Partner integration £25K · Wholesale negotiation £15K · SOC2 prep £20K.

DISCIPLINE

Spend-gate at signup #100

If conversion + churn miss validation by signup #100, paid spend pauses pending repricing. No spend lifts before the funnel signals.

Two tiers. Two density strategies.

Sandbox runs hot and cheap on a single CAX31 via overcommit + idle-suspend. Launch runs warm on CAX41 with bin-packing.

SANDBOX · CAX31 · £0.30/MO

~45 tenants / host

Drop Studio (saves ~400MB RAM + ~300MB disk). Memory overcommit + 16GB swap (1.5× density). 2h idle-suspend. 30-day archive + 7-day grace.

LAUNCH · CAX41 · BIN-PACKED

~25 tenants / host

Per-tenant Docker network. Bin-packing via promote.py. Per-tenant port slice → Caddy routing. Per-tenant Studio + 3 mailboxes.

SANDBOX SCALE TRIGGER

35-warm-concurrent → second CAX31

Pressure watchdog reads /proc/pressure/memory. Alert at avg10 > 20. Operator provisions 2nd CAX31 (+£11.30/mo).

LAUNCH SCALE + GROWTH MIGRATION

22 tenants → cordon · 15 end-user signups → Growth

22-tenants-per-host → cordon; route new promotes to next CAX41. 15th end-user signup migrates to fresh CAX31 dedicated VPS.
